

Looking for Research Experience?

The **Cognitive Neuroscience of Addictions Laboratory (CNALab)** in the McMaster Department of Psychiatry and Behavioural Neurosciences is currently recruiting undergraduate research assistants to join our lab.

The CNALab is located in the Peter Boris Centre for Addictions Research at St. Joseph's Healthcare West 5th Hospital. Our research examines the **cognitive and neural basis of addiction**, with current projects focusing on alcohol and tobacco abuse and their intersection with other psychiatric disorders (e.g., depression)

Research assistants in the CNALab contribute to all aspects of our projects, including recruiting participants, running experiment sessions, data entry/analysis, and preparing presentations and publications.

Students can work for course credit in psychology (**PNB 3QQ3 or PNB 4QQ3**) or can work on a volunteer basis.

Interested students should e-mail Dr. Michael Amlung at amlungm@mcmaster.ca
